PROFESSIONAL SUMMARY

Data analyst with 4+ years of experience making numbers trustworthy across financial services, healthcare and technology: SQL, data modelling, reconciliation and data quality checks, and the dashboards and reports built on top. Holds an MS in Information Science (AI and Machine Learning). Public projects on GitHub show tested pipelines and models built end to end.

TECHNICAL SKILLS

- **Languages:** SQL, Python (pandas, NumPy, scikit-learn, SciPy, pytest), JavaScript (React)
- **Data Engineering:** dbt (models, tests, macros, documentation), Snowflake, BigQuery, Redshift, DuckDB, ETL/ELT, dimensional modelling, Git, GitHub Actions, FastAPI
- **Analytics and BI:** Power BI, Tableau, Excel, Google Sheets, SAP cost data, KPI reporting, A/B testing, forecasting, funnel and cohort analysis
- **Data Quality:** Validation frameworks, reconciliation, automated tests and alerts, documentation
- **Machine Learning and AI:** Classification, regression, time-series forecasting (ARIMA, LSTM with Keras), LLM evaluation, prompt design, data preparation for RAG

PROFESSIONAL EXPERIENCE

Data Analyst | Broadridge Financial Solutions, Inc. | New York, NY | Feb 2025 – Present

- Built an automated SQL validation framework, using scheduled dbt tests and Snowflake tasks, that reconciles the transaction processing system, a client file feed and the billing database before each delivery, cutting manual review hours by 25–30%, measured before and after.
- Set the checks to compare counts and totals per day and source first, then drill into the days that differ; failures send email and chat alerts and are written to a table behind a dashboard.
- Build and maintain dbt models in Snowflake over transaction-processing data, in staging, intermediate and mart layers, with tests and documentation.
- Built and validated 10–15 SQL and dbt models that supply an internal RAG assistant with transaction, client, billing and reference data: standardised definitions, added column descriptions, flattened joins and restricted exposed fields. Reconciliation checks caught duplicate records inflating a reported metric before release.
- Build Power BI and Tableau dashboards, and automate recurring Excel and Google Sheets reports.
- Analyse company data in Python with pandas.

Data Analyst | Optum Global Solutions | Gurugram, India | Nov 2022 – Dec 2023

- Wrote SQL in Amazon Redshift against claims, member and provider data: loaded and checked tables, and fixed missing values, duplicates and claim mismatches, working with ICD-10, CPT/HCPCS and NDC codes on HIPAA-governed data.
- Rebuilt manually assembled reporting as SQL-driven dashboards, bringing turnaround from 1–2 days to same-day.
- Built dashboards and month-end reports for operations and finance teams, and automated month-end steps, returning about 4–6 hours each week.
- Gathered reporting requirements from stakeholders and fixed the problems users found in testing.
- Built what-if forecasts in Excel and Python that linked claims volume to staffing.

Data Analyst | Dell Technologies | Hyderabad, India | Apr 2021 – Oct 2022

- Wrote scheduled SQL in Google BigQuery that turned sales, order and CRM data into daily-refreshed, partitioned and clustered reporting tables.
- Built Power BI dashboards for regional sales teams.
- Produced product cost and margin reports from SAP cost and pricing data, including bill of materials cost rollups with Sourcing and PLM teams.
- Reconciled numbers across CRM, sales and SAP before reports went out.
- Automated weekly reports with Python, SQL and spreadsheet macros, saving 5–8 hours each week.
- Ran monthly demand forecasting and pricing and margin analysis for sales teams.

PROJECTS

Fund Proxy Voting Analysis | github.com/AshokReddy010/fund-proxy-voting | Python, DuckDB, dbt, SQL, LLM evaluation

- Built a pipeline over 73.8 million fund proxy votes from mutual funds and ETFs (33,929 SEC filings, 12,416 funds), with a restartable downloader and 9 dbt models that standardise 40+ spellings of vote values and 12 date formats, covered by 21 data tests and CI.
- Matched 8,274 proposal wordings into 3,850 proposals and labelled their direction using two independent signals; found ESG-named funds backed 33% of specialist-supported proposals against 14% for other funds.
- Checked keyword labels against the reference votes on 664 proposals: agreement was 91.2%, and 94.7% after refining the rules.
- Evaluated an LLM (gpt-oss-120b via the Groq API) for labelling proposal direction against an 815-item answer key; prompt design raised held-out accuracy from 69% to 85%, and a rules-plus-LLM hybrid reached 91% on 578 held-out proposals.

Olist Analytics Engineering | github.com/AshokReddy010/olist-analytics-engineering | dbt, DuckDB, SQL, Python, Power BI

- Modelled 10 raw e-commerce and marketing tables into staging, intermediate and mart layers with dbt (24 models, including an incremental orders table), covered by 80 tests that run in GitHub Actions on every push.
- Built a Power BI dashboard and a lead-scoring model on the marts; on the most recent 2,000 leads, the top 10% of scores closed at 23% against a 10.5% average.

Stock Market Analysis and Prediction Web App | github.com/AshokReddy010/Stock-Market-Analysis-and-Prediction | Python, FastAPI, React

- Built a full-stack web app that shows 7-day price forecasts alongside sentiment analysis of financial news for NASDAQ and NSE stocks, with a FastAPI back end, a React front end and a SQLite database.
- Trained and compared three forecasting approaches (ARIMA, LSTM and linear regression) on five years of daily price data, and combined the forecast trend with news sentiment to produce a buy, sell or hold signal.

EDUCATION

Master of Science, Information Science (Artificial Intelligence and Machine Learning) | University at Albany, SUNY | Albany, NY | 2024 – 2025 | GPA 3.71/4.00

Bachelor of Technology, Computer Science and Engineering | Sathyabama University | Chennai, India | 2018 – 2022 | GPA 7.91/10.00

PUBLICATIONS

- Employee Performance Estimation Using Machine Learning, IJSDR (IJSDR2304246), April 2023. Random Forest classification model on 5,500 HR records and 31 features.
